

## Proper Nutrition in Dairy Cattle Means Staying A Step Ahead. Every Day.

OmniGen® AF, a unique, patented nutritional specialty product from Phibro Animal Health is recommended to be fed to dry, pre-fresh and lactating cows every day to help support immune function in the face of expected and unexpected stress events.

Feeding OmniGen AF every day helps support a healthy immune system, which may result in fewer health events, lower somatic cell count, and fewer cases of mastitis and metritis. This, in turn, may lead to higher milk production and fewer unplanned culls.

### A Step Ahead.

It is far more cost-effective to maintain normal immune function than it is to treat health and disease issues. Continuous use of OmniGen AF, helps support healthy immune function, which may lead to better herd health and productivity as well as greater profitability.

#### Maintaining a healthy immune system may:

- Help reduce somatic cell count
- Help reduce the incidence of mastitis
- Help reduce the incidence of metritis
- Help reduce death loss and unplanned culls
- Help reduce duration and number of cows in the sick pen
- Help increase milk production
- Help improve reproduction
- Help reduce the need for antibiotic use
